

TecART / Manual Switcher Rack Mount
DATA AND DMX DISTRIBUTION

The TecArt Manual Switcher is used to switch between two lighting desks, with up to 4 DMX universes for each desk. The inputs are connected via front panel XLR connectors and the output connectors are on the rear of the unit. Each input/output has a separate power supply and is electrically isolated to ensure the highest possible level of protection.

The units are available with a choice of 3 or 5 pin connectors, and are also available in 1, 2 or 3 inputs/outputs.
