

Tec
ART / Merger Rack Mount
DATA AND DMX DISTRIBUTION

The TecArt Merger is a 19" rack mount unit with 2 into 1 merging.

The DMX512 Merger combines data from two separate DMX512 inputs and provides a single merged data output on a (HTP) Highest-Takes-precedence basis.

The unit can also have the merged output split across 8 opto-isolated outputs with separate drivers and power supplies.

The units are available with a choice of 3 or 5 pin connectors.

Available in the following versions:

- DMX512 Merger 2 inputs 1 output.
- DMX512 Merger/Splitter 2 inputs with up to 8 merged outputs.
