

TecART LIGHTING | K 5600® / HMI Joker  
HMI LIGHTING

The HMI Joker is a compact HMI light designed around a unique UV-block bulb. Designed specifically to take full advantage of the large reflective material inside a softbox, the fixture provides substantially more output than a regular PAR. It can be used with two different beamers and with a segmented reflector or several different lenses. It is available in four sizes – 200W, 400W, 800W and 1600W.
