

# / LED Digital Sputnik DS3

LED LIGHTING - SPOT LIGHT

DS3 can transform into a variety of shapes and forms of light – with a few simple accessories, it can change into a softlight, brute or beam. The 3 light modules can be stacked to form a single, more powerful fixture. Available in either DMX/RDM or ArtNet options. The DS3+ option includes modular diffuser boxes to offer camouflage, to hide the individual LED source and form a uniform light beam. The various size of included holographic filters are versatile: one way they split the beam into 34 degrees, the other way, 76 degrees. Comes with power supply and tripod mount, with the DS3+ also coming with diffuser boxes and lenses.
